About DK Fibreglass

DK Fibreglass Works are a family run ISO9001: 2015 certified GRP Manufacturer and have been producing the very highest of quality GRP components for over 3 decades.

The company like most started from humble beginnings established in 1985 by Ken Regini in a 16 x 8 ft Garage manufacturing Mini Crazy Golf Courses and it was only through Ken's hard work and determination which led to his first sale to Warner Leisure Hayling Island that enabled Ken to move the business to its first official premises.

Due to Ken's work ethic, determination and clear passion for his company and customers alike, Ken was able to build and establish the company into a trusted leading supplier to the Leisure Industry.

Constantly looking at ways to expand and diversify the business, Ken decided to not only manufacture mini crazy golf but to start manufacturing GRP components for local companies. Over the years this has developed into long standing contracts with numerous companies spanning various industries.

Sadly, Ken passed away in 2017, with the reigns of the business being passed on to his Grandson Ross Regini. Ross is keen to continue his Grandfather's legacy by ensuring DK Fibreglass Works continues to offer the perfect solution to those companies who are looking for a reliable, passionate, specialist GRP Component Supplier.

Our Customers

Among the end users of some our products are numerous prestigious companies within the retail, industrial, utility and holiday sectors:

Our Services

With over 30 years' experience DK Fibreglass Works has a wealth of knowledge in all aspects of hand lay-up GRP laminating and believe we can offer a service to suit all your requirements.

Working with our customers we pride ourselves on providing a comprehensive service throughout an entire project, from initial mould production to completed component. With a 'no job too small' attitude our laminators and inspection team work together to ensure the same high-quality standard is achieved for all work that is being carried out, whether it is for a single item or for larger batch work the same level of care and attention is applied.

Due to glass reinforced plastic being such a lightweight, robust material which when combined with a coloured gel can produce a product which has a smooth glossy finish in practically any colour you desire, GRP is an ideal material to be used in all manner of applications in a wide range of industries from the Offshore and Marine sectors right through to the Industrial, Automotive sectors and even for theatrical props and statues.

Marine Sector

With several long-standing customers in the Marine sector, DK Fibreglass Works has a long history in producing all manner of marine components. Over the years we have carried out contracts to manufacture small power boats and river cruisers as well as the production of individual components for supply vessels including deck hatches, control consoles, seating consoles, wiper guards and various other components.

Automotive Sector

DK Fibreglass Works carries out the manufacture of GRP components connected to the automotive industry. We have previously worked with customers to supply bespoke body panels including wheel arches, rear light panels, day cabs and side collars, as well as battery housings and anti-slip overlay floors. Vehicles worked on range from heavy goods vehicles right through to mobility scooters and forklifts.

Previous contracts have also included the customisation of panel vans into hygienic food trucks for the use of transporting fresh fish.

Offshore Sector

Due to the versatility of glass reinforced plastic and its water resistant, non-corrosive properties, it is a preferred material for the manufacture of products in the Offshore sector. DK Fibreglass Works works with several offshore companies producing fire resistant cabinets, display frames and acid resistant ventilated battery housings for solar farms in the Saudi Arabian Desert.

General Production

With being in business for over 30 years, DK Fibreglass Works has carried out a variety of projects ranging from different coloured large chemical spill boxes for a chemical manufacturing plant, to lockable storage cabinets and kiosks/sheds, and even a 30ft Bugs Bunny. We are always willing to undertake any type of contract and thrive on being challenged to produce something out of the ordinary.

Repair and Maintenance Contracts

DK Fibreglass Works proudly offers a repair, refurbishment and maintenance Service to all sectors of industry. With a reputation built upon many years of experience, we believe, we have developed a service which is able to meet any requirement in a prompt, cost effective manner.

Our service can be tailored to your specific requirements, ranging from a simple repair of a product to a complete overhaul, completed in a timeframe that suits your business activities. Whilst most repairs are carried out in our Workshop based in Lowestoft, Suffolk, we do understand it is not always possible for our Customers to come to us and with this in mind will carry out some repairs on site.

With several maintenance contracts with companies in the Offshore industry, DK Fibreglass Works specialise in all aspects of boat repair and refurbishment from hull repair right through to a complete overhaul of a supply vessel, which can include stripping out the existing GRP components e.g. deck, control and seat consoles, wiper guards and nose guards and replacing with new. We also carry out contracts for ancillaries and accessories including smartbuoy toroidal floats, GRP tanks, pinger pods and life raft deployment pods.

Please contact Ross to discuss your requirements today on **01502 572562** or email **dkfibreglass@gmail.com**.

Testimonials

“Seacor Marine are a major player in the offshore shipping, supply & standby industry operating from various worldwide locations. Here in Lowestoft we operate 25 purpose built multi-role vessels for the North Sea gas rigs; each ship has up to 3 dedicated rescue boats that are in constant demand. These boats have to be maintained to the highest standard and ready to use at any given time during the day or night, 365 days a year.

Often damage is sustained when launching or being recovered to the mother vessel in the challenging sea states found in the Southern Sector of the North Sea, and we have to be safe in the knowledge that any repairs carried out are done to the manufacturers standards in an efficient and professional manner. That is why we choose to contract DK Fibreglass to undertake these repairs.

Their years of knowledge in both fibreglass boat repair and construction was the key point when we appointed them as our main agent repairer. Over the years of trading with them, it has become apparent the passion that Ross, Kenny and their team have to build on success; they always deliver on time which is critical to our business. From one-off bespoke designs, moulding and production, to everyday items, we have been extremely satisfied at the quality and value given by DK's.

Peter Mantripp

Manager

Boston Putford Offshore Safety Ltd

“Cefas have had excellent service and after-sales service from DK Fibreglass for more than 14 years. We've entrusted them with the moulds for our SmartBuoy Toroidal Floats and have never had any faults with their finished product. They have always endured to meet our demands at very short notice and delivered their product to the same excellent standards.”

Neil Needham

Marine Mooring Technician

Cefas

“Seaward Safety Ltd. are pleased to be associated with DK Fibreglass and have always found them to be helpful and pro-active in providing our existing components or working towards possible new fibreglass products. We recommend contacting DK Fibreglass to discuss any fibreglass requirements you may need.”
